

System Maintenance

Prevents blocked drippers and build-up in hydroponics, coco and soil systems

FloraMax System Maintenance is a safe, organic additive for maintaining the condition of nutrient solutions:

- **Prevents the blockage of drippers, pipes, pumps and filters.** Helps stop white, stringy muck from forming in the nutrient solution to increase the reliability of watering systems. These issues are common where organic, carbohydrate or sugary additives are being used, or if the nutrient temperature is too high.
- **Compatible with all nutrient types** including sensitive organics and beneficial bacteria.
- **Is safe to use from seed to harvest** which ensures the growing system delivers consistent yields all year round.
- **Also serves as a cleaner for tools and system hardware** especially during post harvest clean-up.
- Dosage: 1ml/L (4ml/Gal) during veg and flower.
- Available in: 1L // 5L // 20L // 200L // 1000L

Sample of Aug 19 VegaFlora test batch with all FloraMax additives and **SYSTEM MAINTENANCE**. Despite being exposed to shaded sunlight for **19-months** there is still no sign of white, stringy muck - @floramaxlab

TESTIMONIES

“When the day temperatures rise we get white slimes growing in the reservoir. This stuff goes through our system blocking pumps, drippers and pipes... System Maintenance has stopped this from happening, which has saved us A LOT of unnecessary maintenance and guaranteed our plants are getting watered on time.”
