

Resin-XS

The #1 BLOOM BOOSTER for serious growers

- Stimulates floral blooms and helps promote higher fruit weight.
- Improves the ability of plants to absorb water and other nutrients. This helps ensure growth rates are optimized.
- Improves the rigidity of stems and the capacity to withstand heavier yields.
- Improves plant tolerance to heat stress.
- Helps plants produce proteins which is important for preventing stunted growth, leaf yellowing and necrosis.
- Resin-XS is PGR and carbohydrate free.
- Resin-XS will NOT induce foul residues or odors in the reservoir, nor cause blockages to drippers and filters.
- Dosage: 3-4 ml/L (11-15 ml/Gal). Use in conjunction with PK additives from about mid-bloom (week 3) until harvest.
- Available in: 1L // 5L // 20L // 200L // 1000L

Impact upon trichome size: Without Resin-XS (left) & with Resin-XS (right)

Revolutionary Organic Compounds

Over half of the FloraMax additives contain organics, but as analytical chemists, we have been able to isolate specific 'beneficial' organic molecules and incorporate them into our additives in a direct, purified, and potent form. This enables their concentrations to be optimized for maximum nutrient effect with no negative side-effects. The result is a range of products that produce unique and tangible results without reservoir foaming, build-ups, odors or blockages.

TESTIMONIES

“

“When the trichomes pushed out there was easily a third more than normal”.

“What I really enjoy about using your line though is that the buds do not have a PGR look to them and they look natural almost organic in their structure. Secondly the bud sites are huge and filled with resin! (USA Commercial consultant)”
